

GeoN Marinewater Sampler

for high quality sampling of water and/or gas in open aquifers (open pipes, wells, drilled holes, mineshafts and lakes)

GeoN Marinewater Sampler is available in three sizes, for 35, 150 and 500 ml sample volume. A 150 ml sampler is shown above. The main features of the GeoN Marinewater Sampler are:

- no sample handling in the field
- low risk for oxidation of the sample due to evacuation of the sample container
- dissolved gas will be sampled and can be analysed separately
- the sample origins from sampling depth and is totally representative for that level, it even has the same pressure as at sampling depth
- uncomplicated function, easy to handle
