

GeoN Groundwater Sampler

for high quality sampling of groundwater and dissolved gas/soilgas

GeoN Groundwater Sampler is available in three sizes, for 35, 150 och 500 ml sample volume. A 150 ml sampler is shown above. The main features of the GeoN Groundwater Sampler are:

- no sample handling in the field
- the risk for cross contamination between wells is eliminated
- low risk for oxidation of the sample due to evacuation of the sample container
- dissolved gas will be sampled and can be analysed separately
- the sample originates from the soil layer that surrounds the filter and is totally representative for that level. The sample even has the same pressure as at sampling level
- very small purging volume, less than 40 ml
- uncomplicated function, easy to handle
